BreatheSafe

VoltAire PLUS

The Next Generation in Filter Performance

The PLUS Range is designed to help operators get more from their filtration systems. With improved airflow efficiency, reliable sealing in demanding conditions, reduced material waste and a simpler approach to filter management, PLUS delivers practical improvements across the life of the filter.

Optimised System Performance

Airflow performance can affect the operation of a filtration system. PLUS delivers improved airflow efficiency, supporting effective system performance in demanding applications.

Reliable Performance in Demanding Conditions

High vibration and extreme temperatures can challenge filter sealing and system performance. PLUS helps maintain consistent contact and seal integrity for reliable filtration.

Simplified Filter Management

Managing multiple filter types can add complexity to inventory and maintenance. The PLUS Range provides a pathway to simplify stock management and ongoing servicing.

Reduced Waste

Every filter change creates material waste. PLUS reduces the amount of material discarded during replacement, helping minimise waste across ongoing maintenance.

Simplified Handling and Logistics

Filters need to be handled, transported and stored throughout their service life. A smaller, lighter design helps make each step easier and more efficient.

Important Upgrade Information

The current VoltAire filter is being phased out. Limited stock will be available while supplies last. Future replacements will use the PLUS filter with an Upgrade Kit or a compatible PLUS pressuriser.
